

Program: Sort 3 Numbers
in Ascending Order using
Multiple If-Else.

Method 1:

WAP to input three numbers and print them in ascending order.

```
import java.util.*;
class ascending{
    public static void main(String Args[]) {
        int a,b,c,l,m,s;
        Scanner sc= new Scanner(System.in);
        System.out.println("Enter three numbers");
        a= sc.nextInt();
        b= sc.nextInt();
        c = sc.nextInt();
        if(a>b&& a>c){
            l=a;
        }
        else if(b>a&& b>c){
            l=b;
        }
        else{
            l=c;
        }
        if(a<b&& a<c){
            s=a;
        }
        else if(b<a&& b<c){
            s=b;
        }
        else{
            s=c;
        }
        if(l!=a&& s!=a){
            m=a;
        }
        else if(l!=b&& s!=b){
            m=b;
        }
        else{
            m=c;
        }
        System.out.println(s+" "+m+" "+l);
    }
}
```

```
        else if(b<a&& b<c){
            s=b;
        }
        else{
            s=c;
        }
        if(l!=a&& s!=a){
            m=a;
        }
        else if(l!=b&& s!=b){
            m=b;
        }
        else{
            m=c;
        }
        System.out.println(s+" "+m+" "+l);
    }
}
```

Method 2:

WAP to input three numbers and print them in ascending order.

```
import java.util.*;
class ascending{
    public static void main(String Args[]) {
        int a,b,c,l,m,s;
        Scanner sc= new Scanner(System.in);
        System.out.println("Enter three numbers");
        a= sc.nextInt();
        b= sc.nextInt();
        c = sc.nextInt();
        l= Math.max(Math.max(a,b),c);
        s = Math.min(Math.min(a,b),c);
        if(l!=a&& s!=a){
            m=a;
        }
        else if(l!=b&& s!=b){
            m=b;
        }
    }
}
```

```
else{
    m=c;
}
System.out.println(s+" " +m+ " "+l);
}
}
```
