Module 6: Previous Year Board Questions

Program

Logic

Syntax

Programs [2017 & 2011]

1. Write two separate program to generate the following patterns using iteration(loop) statements.

(a)

```
*  
* #  
* # *  
* # * #  
* # * # *
```

(b)

```
5 4 3 2 1  
5 4 3 2  
5 4 3  
5 4  
5
```

2. Write a program to calculate the sum of all the prime numbers between the range of 1 and 100.

Solution of Pattern

```
class pattern1
{
    public static void main(String Args[])
    {
        int i,j;
        for(i=1;i<=5;i++)
        {
            for(j=1;j<=i;j++)
            {
                if(j%2==0)
                    System.out.print("#");
                else
                    System.out.print("*");
            }
            System.out.println( );
        }
    }
}
```

```
class pattern2
{
    public static void main(String Args[]){
        for (int i=1;i<=5;i++)
        {
            for(int j=5; j>=i; j--)
            {
                System.out.print(j);
            }
            SOPln( );
        }
    }
}
```

Solution of Prime Nos sum

```
import java.util.*;
class prime {
    public static void main(String Args[]) {
        int c=0,n,i,sum=0;

        Scanner sc= new Scanner(System.in);
        n= sc.nextInt();
        System.out.println("Prime no's Btw 1 and 100 are: ");
        for(int i=1;i<=n;i++) {
            c=0;
            for(int j=2;j<i;j++) {
                if(i%j==0)
                    c++;
            }
            if(c==0)
                sum=sum+i;
        }
        System.out.println(sum);
    }
}
```

Programs [2007]

- Write a program to compute and display the sum of the following series:-

$$\begin{array}{l} \frac{1+2}{1*2} + \frac{1+2+3}{1*2*3} + \dots\dots\dots + \frac{1+2+3+4\dots\dots+n}{1*2*3*4\dots\dots*n} \end{array}$$

Solution to Series Program

```
public static void main(String Args[])
{
    int n,i,f1,f2,j,k;
    double sum=0;
    Scanner sc= new Scanner(System.in);
    System.out.println("Enter the number of terms");
    n= sc.nextInt();
    for(i=2;i<=n;i++)
    {
        f1=1;
        f2=0;
        for(j=1;j<=i;j++)
        {
            f1=(f1*j);
        }
        for(k=1;k<=i;k++)
        {
            f2= f2 + j;
        }
        sum= (sum + f2/f1);
    }
    System.out.println(sum);
}
```
